library - react
apis -
rdbms -

Completed:
Decided on Voting System
Discussed but not determined scope and components
Schedule set up on when2meet.com
Started assessing potential challenges

Next:
Meet again Saturday

      Before next meeting:
- individual task: compile list of features/components
- individual task: explore infrastructure options (UI languages, platforms, etc)

      At next meeting:
- group task: agree on scope/components of project
- request feedback from professor if necessary

- discuss infrastructure options
- assign and begin tasks

Questions for Product Owner:

Does "usable in future elections" mean functionality allowing an admin account to create a new election?

Does "third-party" access to voter participation mean anyone or admin?
